

Ankle

Hindfoot Nailing System™

**Stability,
Simplicity
and Flexibility**

IMPLANT

Stability:

- 1) Powerful compression: up to 7mm internal tibio-talar compression and 30mm external compression
- 2) Multi-planar screw fixation functions as a fixed angle construct through the choice of locking the talar screw and two calcaneal screws
- 3) Talar screw is mechanically locked independent of position within slot – helping to increase stability

Simplicity:

- 1) Internal compression mechanism pre-assembled within the Nail – eliminating any last minute assembly
- 2) Reliable and reproducible

Flexibility:

- 1) Comprehensive array of lengths (150, 200, 250, 300mm) available in 10, 11, 12mm diameters
- 2) Freedom to lock the talar screw within any position of the 7mm internal compression mechanism
- 3) Radiolucent, two-piece targeting assembly: allows for freedom to implant screws in the desired orientation and seamless positioning of fluoroscopy

All lengths offered in 10, 11, 12mm diameters

Low Profile Screws (magenta)

(T774xxx)

- 5mm Diameter
- 4.3mm Core Diameter
- 20 - 120mm

Threaded Head Screws (dark blue)

(T775xxx)

- 5mm Diameter
- 4.3mm Core Diameter
- 60 - 120mm; 5mm increments

TARGETING ASSEMBLY

Stability:

- Two-Piece Targeting Assembly: Proximal Targeting Arm is fixed; Distal Targeting Arm locks in 90 degree increments – helping to ensure a secure platform throughout the procedure
- Anatomically shaped heel cup provides stable and even pressure on the heel during external compression

Simplicity:

- Designed to reduce time throughout the procedure.
- Intuitive color coding and marking system.

Flexibility:

- Freedom to target the calcaneal, talus, and tibial screws in the preferred plane.

Guided Supplementary Screw Fixation

– aligning arrow with the black markings ensures an adjunctive Low Profile or Threaded Head Screw is implanted within the “safe zone” (defined as a trajectory that avoids all hardware)
